

Recycle TDK-Lambda's Power Products

TDK-Lambda is proud to be an ISO14001 certified company. As such, we are dedicated to protecting our environment and recycling materials. Our power products contain electronic components and elements that should not be disposed of in the trash. Therefore, for proper treatment, recovery and recycling, please take our used power products to your local designated collection point for processing. Disposing of these products correctly will help save valuable resources and prevent pollution of our environment. Please contact your local authority for the electronic processing and/or recycling site nearest you. Thank you.
